A COST-EFFECTIVE SOLUTION COMBINING TWO ENGINEERING DISCIPLINES**

CONTENTS

PREFACE	vii
PREFACIO	viii
INTRODUCTION OF PROFESSOR FUMIO TATSUOKA, NINETEENTH NABOR CARRILLO LECTURER	ix
PRESENTACIÓN DEL PROFESOR FUMIO TATSUOKA, DECIMONOVENO CONFERENCIANTE NABOR CARRILLO	xii
CURRICULUM VITAE	xv
RESUMEN	1
ABSTRACT	3
1. INTRODUCTION	4
2. EXPERIENCES WITH GRS RWS FOR LAST 20 YEARS IN JAPAN	4
2.1 A brief history of construction of GRS RWs	4
2.2 Brief history of research by full-scale test embankments	8
2.3 Characteristics features of GRS-RW with a FHR Facing	21
2.3.1 Staged construction procedure	21
2.3.2 Full-height rigid (FHR) facing	29
2.3.3 Geosynthetic reinforcement	44
2.3.4 Summary of section 2.3	45
2.4 GRS RWs for reconstruction of failed soil structures	47
2.4.1 Background	47
2.4.2 Remediation of soil structures damaged by flood	47
2.4.3 Remediation of soil structures that failed by earthquakes	49
2.4.4 Rehabilitation of an existing earth-fill dam	60
2.5 Summary of experiences of GRS RWs	62
2.6 Bridge abutments of GRS RW having a staged-constructed FHR facing	62
2.6.1 Problems with conventional type bridge abutments	62
2.6.2 Integral bridge	64
2.6.3 Several geotechnical solutions	65
2.6.4 GRS Integral Bridge	73
2.6.5 Model tests in the laboratory	75
2.6.5.1 Static loading tests	
2.6.5.2 Shaking table tests	
2.6.6 Summary of section 2.6	92

3.	IMPORTANCE OF INTEGRATION OF TWO ENGINEERING DISCIPLINES	92
3.1	Polymer reinforcement is too extensible and may rupture by creep in full-scale reinforced soil structures?	92
3.1.1	General	92
3.1.2	In-air behaviour of geosynthetic reinforcement	93
3.1.3	In-soil behaviour of geosynthetic reinforcement	104
3.1.4	Summary of laboratory tests	115
3.2	Geosynthetic reinforcement in full-scale high walls	115
3.3	Effects of reinforcement type	124
4.	SOME DESIGN ISSUES	126
4.1	Design shear strength of backfill and stability analysis of GRS structure	126
4.1.1	Design versus reality	126
4.1.2	How to achieve high compaction of the backfill	129
4.1.3	Stability analysis using peak and residual shear strengths of backfill	133
4.1.4	Summary	137
4.2	New design strength of geosynthetic reinforcement	137
4.3	Summary of chapter 4	140
5.	CONCLUSIONS	140
	ACKNOWLEDGEMENTS	141
