

José León González Acosta

Postdoctoral Researcher, Delft University of Technology

lgonzalez.a87@gmail.com (+31) 06-2372-5315

Mexican, 36 years old, currently living in The Netherlands

Updated on April 27, 2023

Education

Doctor of Philosophy (Ph.D.) in Geotechnical Engineering

Delft University of Technology (TU Delft), The Netherlands

- Oct, 2015
Oct, 2020
- Focus: Numerical simulations of large ground deformations (e.g., landslides) and soil-structure interaction problems using the Material Point Method (MPM)
 - Thesis: "Investigation of MPM inaccuracies, contact simulation and robust implementation for geotechnical problems"

Master of Science (M.Sc.), in Geotechnical Engineering

National Autonomous University of Mexico (UNAM), Mexico

- Aug, 2011
Sep, 2013
- Focus: Static and dynamic interaction between soft soils and structures
 - Thesis: "Determinación de Asentamientos Considerando la Variación Horizontal de los Parámetros Mecánicos del Suelo" (Determination of Settlements Considering the Horizontal Variation of Soil Mechanical Parameters)

Bachelor of Science (B.Sc.), in Civil Engineering

Autonomous University of Baja California (UABC), Mexico

- Oct, 2005
Jul, 2010
- Focus: Structural design, hydraulics, and soil mechanics

Academic Experience

Delft University of Technology (TU Delft), Delft, The Netherlands

Postdoctoral Researcher

- Since
Jul, 2020
- Developed a numerical finite element (FE) architecture, incorporating novel and current techniques to analyze induced seismicity and earthquake-triggered liquefaction

ACADEMIC RESUME

- Led collaboration between SOFTTOP Ph.D. and Postdoctoral researchers to create a robust, in-house FE code, integrating soil spatial variability and laminated soils constitutive behavior
- Presented SOFTTOP project achievements at conferences and workshops, providing a comprehensive study of Groningen (The Netherlands) ground seismic characterization

National Autonomous University of Mexico Engineering Institute (UNAM), Mexico

Research Assistant

- Feb, 2012
Sep, 2014
- Created new strategies using the Finite Difference Method (FDM) for analyzing water flow in earth structures
 - Prepared technical reports on geotechnical conditions for building foundations, earth dams, subway tracks, and airport runways
 - Conducted field work to develop strategic maps for the installation of seismic noise recorders

Industry Experience

GustoMSC, The Netherlands

Geotechnical Consultant

- Jan, 2020
Jun, 2020
- Analysed static and dynamic stability of offshore structure foundations, such as Jackup rigs
 - Documented essential principles for geotechnical analyses of offshore structures, incorporating the company's expertise and practices

Bowerbird Engineering, Mexico

Geotechnical Consultant

- Oct, 2014
Sep, 2015
- Supported contractors in addressing geotechnical challenges (e.g., deep excavations, foundation stability, slope stability, soil-structure dynamic interaction) in Mexico City's complex subsoil conditions
 - Developed technical manuals for performing numerical studies using MIDAS GTS NX
 - Conducted workshops to train engineers in the appropriate use of the Finite Element Method (FEM) for analysing geotechnical problems

Proyectos Integrales (PIBCSA), Mexico

Construction Manager

- Aug, 2010
Jul, 2011
- Prepared financial and schedule packages for bidding on city structure construction projects
 - Managed and supervised construction projects, overseeing administration and execution

Teaching Experience

Mar, 2023

Co-lecturer CIEM4000: "Soil Structure Interaction" Master's course, TU Delft

In this module, the interactions between water loads and man-made geotechnical structures are investigated in static and dynamic conditions. Additionally, various procedures are explored for the design of geotechnical protective measures in response to these interactions.

- Covered fundamental principles of soil mechanics, including consolidation phenomenon, stability of slopes, and design of retaining and sheet pile walls
- Co-managed the lecture structure, including timetable, teaching subjects, coursework, exam preparation, and grading

Since, 2016
5 Quarters

Teaching assistant in the "Numerical Modelling in Geo-Engineering" Master's course, TU Delft

- Guided students in the concept of rational implementation of numerical techniques in geotechnical engineering
- Assisted students in developing FORTRAN codes to perform numerical simulations of geotechnical problems
- Graded students' technical reports

Dec, 2021

Supervision and Assessment Principles course, TU Delft

This training course is designed to help participants learn and reflect on essential skills needed to communicate and connect with students, including:

- Establishing an effective supervision process
- Creating a safe and motivating learning environment
- Providing effective feedback
- Utilising assessment tools, such as rubrics, to make courses more effective and transparent

Master's students Co-supervisor, TU Delft

1. Do P.C. (2021). Thesis: Implementing dynamic boundary conditions with the material point method.
2. Papakrivopoulos V. (2018). Thesis: Development and preliminary evaluation of the main features of the Particle Finite Element Method (PFEM) for Solid Mechanics.
3. Remmerswaal G. (2017). Thesis: Development and implementation of moving boundary conditions in the Material Point Method.
4. Pantev I. (2016). Thesis: Contact modelling in the Material Point Method.
5. Pruijn N.S. (2016). Thesis: The improvement of the material point method by increasing efficiency and accuracy.

Workshop Attendance

- | | |
|-----------|--|
| Mar, 2019 | 1. Introduction to seismo-acoustic waves in the Earth's spheres, TU Delft. |
| May, 2018 | 2. Introduction to high performance computing, TU Delft. |
| Oct, 2016 | 3. Landslide Risk Assessment and Mitigation, Salerno, Italy. |
